Foreword

This translation has been made based on the original Japanese Industrial Standard revised by the Minister of Economy, Trade and Industry, through deliberations at the Japanese Industrial Standards Committee as the result of proposal for revision of Japanese Industrial Standard submitted by The Japanese Electric Wire & Cable Makers' Association (JCMA)/Japanese Standards Association (JSA) with the draft being attached, based on the provision of Article 12 Clause 1 of the Industrial Standardization Law applicable to the case of revision by the provision of Article 14.

Consequently, **JIS C 3005**:2000 is replaced with this Standard.

This **JIS** document is protected by the Copyright Law.

Attention is drawn to the possibility that some parts of this Standard may conflict with patent rights, applications for a patent after opening to the public or utility model rights. The relevant Minister and the Japanese Industrial Standards Committee are not responsible for identifying any of such patent rights, applications for a patent after opening to the public or utility model rights.

Test methods for rubber or plastic insulated wires and cables

Introduction

This Japanese Industrial Standard was established in 1960 and has gone through nine revisions up to the present. The last revision was made in 2000, and the revision at this time is to respond to the diversification of materials, easiness of selecting testing devices, availability of reagents and so on.

No corresponding International Standard has been established at this point, but this Standard refers to **IEC 60227-2**, **IEC 60245-2**, **IEC 60332-1-1**, **IEC 60332-1-2**, **IEC 60332-1-3**, **IEC 60502-2** and **IEC 60811** series.

1 Scope

This Standard specifies general test methods for wires, cables and cords insulated or sheathed by various rubber materials or plastic materials (hereafter referred to as “wires”).

2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this Standard. The most recent editions of the standards (including amendments) indicated below shall be applied.
