About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

IEC Catalogue - webstore.iec.ch/catalogue

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

IEC publications search - www.iec.ch/searchpub

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing 20 000 terms and definitions in English and French, with equivalent terms in 15 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

65 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

CONTENTS

FOREWORD.....	5
INTRODUCTION.....	7
1 Scope.....	8
2 Normative references.....	8
3 Terms and definitions	11
4 Materials, structures and dimensions	13
4.1 Base materials	13
4.2 Structures of substrates.....	13
4.3 Dimensions of substrates.....	14
4.3.1 Outline.....	14
4.3.2 Sheet dimensions	14
4.3.3 Width and length (roll supply)	14
4.3.4 Substrate thickness.....	15
5 General descriptions of evaluation tests.....	15
5.1 Sampling.....	15
5.2 Preparation of test specimens	15
5.3 Atmospheric conditions for evaluation test	15
5.4 Conditioning.....	15
5.4.1 Polymer substrates	15
5.4.2 Glass substrates	15
5.4.3 Other materials	15
6 Characteristics and evaluation method of polymer substrates	16
6.1 Surface properties.....	16
6.1.1 Surface defects.....	16
6.1.2 Flatness.....	16
6.1.3 Surface condition	17
6.1.4 Edge condition	19
6.2 Mechanical properties	19
6.2.1 Elongation at break.....	19
6.2.2 Tensile strength	19
6.2.3 Tensile modulus	20
6.2.4 Minimum bending radius.....	20
6.2.5 Tear strength and tear propagation resistance	23
6.2.6 Edge strength	24
6.2.7 Hardness	24
6.3 Chemical properties	24
6.3.1 Resistance to chemicals.....	24
6.3.2 Halide contents	25
6.3.3 Volatile content	25
6.3.4 Gas transmission	26
6.3.5 Moisture absorption	27
6.4 Electrical properties	27
6.4.1 Measurement at ambient temperature.....	27
6.4.2 Measurement at high temperature	29
6.5 Thermal properties	29
6.5.1 Glass transition temperature	29

6.5.2	Coefficient of linear thermal expansion	29
6.5.3	Dimensional stability	30
6.5.4	Relative temperature index (RTI)	30
6.6	Optical properties	32
6.6.1	Method of testing the colour of the substrates	32
6.6.2	Refractive index	35
6.6.3	Retardation	35
6.6.4	Luminous reflectance	35
6.6.5	Haze	36
6.7	Flammability	36
6.7.1	Outline	36
6.7.2	Test method	36
6.7.3	Report of the results	36
7	Characteristics and evaluation method of glass substrates	37
7.1	Surface properties	37
7.1.1	Surface roughness	37
7.1.2	Chips and cracks	37
7.1.3	Foreign inclusions	37
7.1.4	Foreign substances on surface	38
7.1.5	Scratches	38
7.2	Mechanical properties	38
7.2.1	Young's modulus and Poisson's ratio	38
7.2.2	Density	38
7.2.3	Hardness	39
7.3	Chemical properties	39
7.3.1	Resistance to chemicals	39
7.3.2	Gas transmission	39
7.4	Thermal properties	39
7.4.1	Coefficient of linear thermal expansion	39
7.4.2	Strain point	39
7.5	Optical properties	40
7.5.1	Refractive index	40
7.5.2	Luminous transmittance	40
8	Characteristics and evaluation method of other materials (ceramics, metal, paper, others)	40
9	Storage	41
9.1	Storage conditions	41
9.1.1	Climatic conditions	41
9.1.2	Chemically active substances	41
9.1.3	Mechanically active substances	41
9.1.4	Other conditions	41
9.2	Storage period	41
10	Packaging and marking	41
10.1	Packaging	41

INTERNATIONAL ELECTROTECHNICAL COMMISSION

PRINTED ELECTRONICS –

Part 201: Materials – Substrates

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62899-201 has been prepared by IEC technical committee 119: Printed electronics.

The text of this standard is based on the following documents:

FDIS	Report on voting
119/87/FDIS	119/100A/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 62899 series, published under the general title *Printed electronics*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

INTRODUCTION

The IEC 62899-20x series relates mainly to evaluation methods for materials of printed electronics. The series also includes storage methods, packaging and marking, and transportation conditions.

The IEC 62899-20x series is divided into parts for each material. Each part is prepared as a generic specification containing fundamental information for the area of printed electronics.

The IEC 62899-20x series consists of the following parts:

Part 201: Materials – Substrates

Part 202: Materials – Conductive ink

Part 203: Materials – Semiconductor ink¹

(Subsequent parts will be prepared for other materials.)

Furthermore, sectional specifications, blank detail specifications, and detail specifications for each material will follow these parts.

This part of IEC 62899 is prepared for substrate used in printed electronics and contains the test conditions, the evaluation methods and the storage conditions.

¹ Under consideration.

PRINTED ELECTRONICS –

Part 201: Materials – Substrates

1 Scope

This part of IEC 62899 defines the terms and specifies the evaluation method for substrates used in the printing process to form electronic components/devices. This international standard is also applied to the substrates which make surface treatment in order to improve their performance.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60050 (all parts), *International Electrotechnical Vocabulary* (available at www.electropedia.org)

IEC 60093:1980, *Methods of test for volume resistivity and surface resistivity of solid electrical insulating materials*

IEC 60216-1:2013, *Electrical insulating materials – Thermal endurance properties – Part 1: Ageing procedures and evaluation of test results*

IEC 60216-2, *Electrical insulating materials – Thermal endurance properties – Part 2: Determination of thermal endurance properties of electrical insulating materials – Choice of test criteria*

IEC 60216-3, *Electrical insulating materials – Thermal endurance properties – Part 3: Instructions for calculating thermal endurance characteristics*

IEC 60216-4-1, *Electrical insulating materials – Thermal endurance properties – Part 4-1: Ageing ovens – Single-chamber ovens*

IEC 60216-5, *Electrical insulating materials – Thermal endurance properties – Part 5: Determination of relative thermal endurance index (RTE) of an insulating material*

IEC 60216-6, *Electrical insulating materials – Thermal endurance properties – Part 6: Determination of thermal endurance indices (TI and RTE) of an insulating material using the fixed time frame method*

IEC 60243-1:2013, *Electric strength of insulating materials – Test methods – Part 1: Tests at power frequencies*

IEC 60674-2:1988, *Specification for plastic films for electrical purposes – Part 2: Methods of test*
