About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

IEC Catalogue - webstore.iec.ch/catalogue

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

IEC publications search - www.iec.ch/searchpub

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing 20 000 terms and definitions in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

65 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

CONTENTS

FOREWORD.....	4
1 Scope.....	6
2 Normative references	6
3 Terms, definitions, and abbreviated terms	6
3.1 Terms and definitions.....	6
3.2 Abbreviated terms.....	7
4 Standard measuring equipment and coordinate system	7
4.1 Light measuring device	7
4.2 Viewing direction coordinate system	8
4.3 Standard measuring environmental conditions	9
4.4 Power supply	9
4.5 Warm-up time	10
4.6 Standard measuring dark-room conditions	10
4.7 Standard set-up conditions	10
5 Measuring methods	10
5.1 Measuring methods for spatial image quality.....	10
5.1.1 Viewing angle	10
5.1.2 Colour characteristics	17
5.1.3 Crosstalk	22
5.1.4 Static image resolution	25
5.2 Measuring methods for temporal image quality	30
5.2.1 Flicker	30
5.2.2 Grey-to-grey response time	33
Annex A (informative) Simple matrix method for correcting the stray light of imaging instruments.....	35
A.1 Purpose	35
A.2 Measuring method	35
Annex B (informative) Measuring the moving picture perceptual resolution of a display	37
B.1 Purpose	37
B.2 Measuring conditions	37
B.2.1 Measuring equipment	37
B.2.2 Requirements for the camera system.....	37
B.2.3 Requirements for test pattern	37
B.2.4 Parameters for measuring condition	39
B.2.5 Measurement procedure	39
Bibliography.....	41
Figure 1 – Representation of the viewing direction	9
Figure 2 – DUT installation conditions.....	10
Figure 3 – Conceptual geometry used for measuring the viewing angle range.....	11
Figure 4 – 4 % window pattern for half luminance angle.....	12
Figure 5 – Test pattern for gamma measurement	14
Figure 6 – Example of linear regression of $\log(\Delta L_i)$ versus $\log(\Delta V_j)$ at normal direction (0°)	15
Figure 7 – 4 % window pattern for measuring the ‘red’ primary colour.....	18

Figure 8 – 4 % window pattern for each <i>G</i> , <i>B</i> , <i>C</i> , <i>M</i> , <i>Y</i> colour	18
Figure 9 – Test pattern for gamut change of the colour scale	20
Figure 10 – Example of the measurement results.....	21
Figure 11 – Test pattern for colour desaturation.....	22
Figure 12 – Standard measurement positions	23
Figure 13 – Luminance measurement of 4 % window at P_0	23
Figure 14 – Luminance measurement at P_0 with windows A_{W1} , A_{W2} , A_{B3} , and A_{B4}	24
Figure 15 – Luminance measurement at P_0 with windows A_{W5} , A_{W8} , A_{B5} and A_{B8}	25
Figure 16 – Test pattern for effective resolution	26
Figure 17 – Example of luminance window for one-line gridded input.....	28
Figure 18 – Contrast modulation measurement	29
Figure 19 – Apparatus arrangement.....	30
Figure 20 – Temporal contrast sensitivity function.....	32
Figure 21 – Example of flicker modulation waveform.....	32
Figure 22 – Example of response time waveform	34
Figure A.1 – Result of spatial stray light correction for an imaging photometer.....	36
Figure B.1 – Example of grey levels.....	38
Figure B.2 – Example of frequency based on full HD resolution	38
Figure B.3 – Example of test signal for full HD	39
Figure B.4 – Example of captured image and one-dimensional data.....	40
Figure B.5 – Example of motion blur threshold point	40
Table 1 – Working example for gamma distortion from viewing direction	15
Table 2 – Reference areas for the colour reproduction range	16
Table 3 – Example of measurement results for colour fidelity	20
Table 4 – Example of measurement results for gamut change of colour scale	20
Table 5 – Example of measurement results for 1 x 1 gridded colour desaturation.....	21
Table 6 – Temporal contrast sensitivity function.....	31
Table 7 – Example of reporting form of grey-to-grey response time.....	34
Table B.1 – Six different grey levels.....	38

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ORGANIC LIGHT EMITTING DIODE (OLED) DISPLAYS –

Part 6-3: Measuring methods of image quality

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62341-6-3 has been prepared by IEC technical committee 110: Electronic display devices.

This second edition cancels and replaces the first edition published in 2012. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) the measuring method for viewing angle has been modified. Measurement of the half luminance angle, gamma distortion, and directional colour variation is added;
- b) measurement method for colour characteristics is added;
- c) additional explanation is added in static image resolution clause;
- d) moving image resolution clause has been moved to Annex B.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
110/901/FDIS	110/923/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all the parts in the IEC 62341 series, under the general title *Organic light emitting diode (OLED) displays*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

ORGANIC LIGHT EMITTING DIODE (OLED) DISPLAYS –

Part 6-3: Measuring methods of image quality

1 Scope

This part of IEC 62341 specifies the standard measurement conditions and measuring methods for determining the image quality of organic light emitting diode (OLED) display panels and modules.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 62341-1-2:2014, *Organic light emitting diode (OLED) displays – Part 1-2: Terminology and letter symbols*

3 Terms, definitions, and abbreviated terms

3.1 Terms and definitions

For the purposes of this document, the terms and definitions given in IEC 62341-1-2 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1.1

average picture level

APL

average loading percentage of display sub-pixels based on input signal levels

3.1.2

static image resolution

maximum number of lines that can be adequately distinguished horizontally and vertically across the screen for static image signal inputs

Note 1 to entry: The unit of resolution is line, but pixel is also available as the unit of resolution.

3.1.3

colour fidelity

ability to reproduce the intended colour

3.1.4

colour desaturation

difference in chromaticity coordinates between solid colour and gridded pattern caused by image sharpening algorithm
