Foreword

This Japanese Industrial Standard has been established by the Minister of Economy, Trade and Industry, through deliberations at the Japanese Industrial Standards Committee in accordance with the Industrial Standardization Law.

This **JIS** document is protected by the Copyright Law.

Attention is drawn to the possibility that some parts of this Standard may conflict with patent rights, applications for a patent after opening to the public or utility model rights. The relevant Minister and the Japanese Industrial Standards Committee are not responsible for identifying any of such patent rights, applications for a patent after opening to the public or utility model rights.

Determination method and evaluation reference of shape stability shirt

Introduction

Various products with enhanced shape stability and processing durability, such as of men's shirt, working wear and women's blouse, that are designated as shape stability or permanent-press products, are currently in market. The shape stability of these products is achieved by subjecting the product and/or the fabric to chemical treatment such as resin treatment, and sewing process by an appropriate technique.

This Japanese Industrial Standard specifies the evaluation method for shirts that are processed to have shape stability, regardless of the processing method used.

No corresponding International Standard has been established at this point.

1 Scope

This Standard specifies the method for evaluating the shape stability performance of shirts that are processed with a shape stability treatment.

"Shirts" as referred to in this Standard include long-sleeved and short-sleeved shirts for which fitting property of collar girth and sleeve length is strongly required, and do not include casual shirts.

2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this Standard. The most recent editions of the standards (including amendments) indicated below shall be applied.
