

TAS SEPTEMBER 1987

STANDARDS ASSOCIATION OF AUSTRALIA

Australian Standard

METHODS OF TESTING PORTLAND AND BLENDED CEMENTS

AS 2350.1
CEMENT TEST CERTIFICATES

PREFACE

This standard was prepared by the Association's Committee on Cement, as part of a series of standards on the testing of portland and blended cements.

The standard constitutes the revision of Appendix A, Cement Test Certificate, of AS 1315—1973, Portland Cement. In the revision, account was taken of the adjustments necessary as a result of current revision work on the specifications contained in AS 1315 and AS 1317. Two certificates are described, one for recording results of tests on portland cement and the other on blended cements.

SCOPE. This standard describes two cement test certificates; one suitable for recording the results of the testing of portland cement as required by AS 1315, and the other for recording the results of the testing of blended cements as required by AS 1317.

NOTE: It is not intended that the format of the cement test certificates presented in this standard be mandatory.
